To start the application make sure you have installed the "ElectronNET.CLI" packages as global tool:

```
dotnet tool install ElectronNET.CLI -g
```

At the first time, you need an Electron.NET project initialization. Type the following command in your ASP.NET Core folder:

```
electronize init
```

- Now a electronnet.manifest.json should appear in your ASP.NET Core project
- Now run the following:

```
electronize start
```

Blazor Hybrid con Electron.NET

Electron: quanto ci costi?

Download size (compressed)
