GitHub Copilot

Who is Copilot for?

Senior Engineers

Accelerate boilerplate code generation leverage design patterns, and simplify complex problem-solving.

Junior Engineers

Expedite learning, facilitate as a pair programmer, and mentor.

Global shift in the way software is developed.

Copilot enables
55% faster coding
and
15% higher code
quality

50,000+ businesses
building software with
Copilot

```
16 def test_parse_expenses_with_empty_input(self):
17     expenses_string = ''
18     expected_output = []
19     self.assertEqual(parse_expenses(expenses_string),
20                       expected_output)
21
22 def test_parse_expenses_with_comments(self):
23     expenses_string = '# This is a comment\n2023-01-02'
24     expected_output = [(datetime.datetime(2023, 1, 2),
25                       parse_expenses(expenses_string),
26                       None)]

Knowledge discovery, analysis, and collaboration

Navigating unfamiliar codebases

Code reuse

- The submission process itself is handled by the `TalkSubmitView` class in `views.py`. This is a `CreateView` which requires the user to be logged in (`LoginRequiredMixin`). The form asks for 'title', 'abstract', and 'track' fields for a talk. Once the form is filled out and submitted, the talk is associated with the logged-in user and saved to the database ([source](#)).

Is there anything else you'd like to know about this process?

Copilot

DataStax

Chat with your data! Write queries and code with natural language.

Copilot

Docker

Accelerate container application development with Docker.

Copilot

LambdaTest

Design, implement, and analyze test automation right where you code.

Copilot

LaunchDarkly

Create, manage, and get greater visibility on your feature releases.

Copilot

McKinsey & Company

Get a head start – generate working code straight from your library of use cases.

Copilot

Microsoft 365

Create custom projects with Office APIs.

Copilot

Microsoft Azure

Learn, manage, and troubleshoot Azure with ease.

Copilot

Microsoft Teams

Create, debug, and deploy Teams apps with Teams Toolkit.

Copilot

MongoDB

Connect to MongoDB and Atlas directly from your VS Code environment.

Copilot

Octopus Deploy

Stay in the flow! Get answers to deployment-related questions quickly and easily.

Copilot

Pangea

Ship secure features in your apps quickly with 19 pre-built security services.

Copilot

Pinecone

Unlock the power of vector search. Code faster and build better AI applications.

Copilot

Product Science

Get help with performance optimization techniques to make your code faster.

Copilot

ReadMe

Let developers ask questions about your API and get code responses, directly in VSCode.

Copilot

Sentry

Fix broken code fast. All of Sentry's context, right where you want it.

Copilot

Stripe

Build, test, and use Stripe inside your editor.

Microsoft Copilot for Azure

You need to do more,
and you need it...

- ✓ Correct
- ✓ Performant
- ✓ Compliant
- ✓ Repeatable
- ✓ Safe
- ✓ Cost effective
- **Yesterday**

What can we build to help you do more?

Customers want an assistant to help them...

- 1 Learn about Azure
- 2 Answer questions about their environment
- 3 Accelerate workload deployment
- 4 Recommend best services & capabilities
- 5 Automate low-risk tasks
- 6 Monitor & get insights about their environment
- 7 Troubleshooting, help & support
- 8 Optimize their environment

Microsoft Copilot for Azure Overview

- Copilot for Azure helps you:
 - **Design:** create and configure the services needed while aligning with organizational policies
 - **Operate:** answer questions, author complex commands, and manage resources
 - **Troubleshoot:** orchestrate across Azure services for insights to summarize issues, identify causes, and suggest solutions
 - **Optimize:** improve costs, scalability, and reliability through recommendations for your environment

Hello Santhosh, how can I help?

Discover Copilot, a whole new way to work

Explore new ways to work smarter and faster using the power of AI. Copilot in Azure can help you answer questions using the latest Azure documentation, perform basic management operations for your environment, find the best services and capabilities for your workload, and more.

Hello Santhosh, how can I help?

A few more things about Copilot

Copilot knows about your roles, resources, policies, and much more. But Copilot has limits. Any action you would like to take on more than 5 resources must be performed outside of Copilot. While in private preview you can only make 10 requests during any given chat and you only have 5 chats in a 24 hour period.

Troubleshoot your apps faster with App Service

- › My web app is down
- › My web app is slow
- › Enable auto heal
- › Take a memory dump

Understand service health events and status

- › Am I impacted by any service health events?
- › Is there any outage impacting me?
- › Can you tell me more about this tracking ID {0}?
- › Is the event with tracking ID {0} still active?
- › What is the status of the event with tracking ID {0}?

Generate Azure CLI scripts

- › I want to create a virtual machine using Azure CLI
- › I want to use Azure CLI to deploy and manage AKS using a private service endpoint
- › I want to create a web app using Azure CLI

Author API Management policies

- › Generate a policy to configure rate limiting with 5 requests per second
- › Generate a policy to remove a 'X-AspNet-Version' header from the response
- › Explain (selected policy or element) to me

Get information about Azure Monitor logs

- › Are there any errors in container logs?
- › Show logs for the last day of pod <provide_pod_name> under namespace <provide_namespace>
- › Show me container logs that include word 'error' for the last day for namespace 'xyz'
- › Check in logs which containers keep restarting
- › Show me all Kubernetes events

Generate Kubernetes YAML files

- › Help me generate a Kubernetes YAML file for a frontend service using port 8080
- › Give me an example YAML manifest for a CronJob that runs every day at midnight and calls a container named nightlyjob
- › Generate a Kubernetes Deployment YAML file for a web application named 'my-web-app'. It should run three replicas and expose port 80
- › Generate a Kubernetes Ingress YAML file that routes traffic to my frontend and backend services based on hostnames

Hello Cameron, how can I help?

I want to ...

0 / 500

Current Limitations

- Any action taken on more than 10 resources must be performed outside of Microsoft Copilot in Azure.
- You can only make 15 requests during any given chat, and you only have 10 chats in a 24 hour period.
- Some responses that display lists will be limited to the top five items.
- For some tasks and queries, using a resource's name will not work, and the Azure resource ID must be provided.
- Microsoft Copilot in Azure is currently available in English only.

Thank You!
