Ricerca in Windows 8

E' possibile cercare, sempre dallo stesso posto

Lanciare le applicazioni è semplice e veloce

Agli utenti piace perché è efficiente

Problemi

Non così efficiente: bisogna sempre cambiare il contesto di ricerca

Troppo ad alto livello: non è possibile creare una ricerca più complessa

Ricerca in Windows 8.1

Ricerca in Windows 8.1

Smart Search

Risultati forniti dal SO per una ricerca sul Web o su Windows da charmbar

In-app search

Nuovo controllo SearchBox per la ricerca contestuale all'interno dell'app

Demo

Smart Search, In-app Search (Bing Finanza)

Controllo SearchBox

Il modo più veloce per implementare la ricerca in-app

Tutti i vantaggi del SearchPane in un controllo customizzabile

Ricerca flessibile

La ricerca avviene in un solo posto all'interno dell'app

Esperienza di ricerca prevedibile

Risultati su misura

Tutte le feature da Windows 8

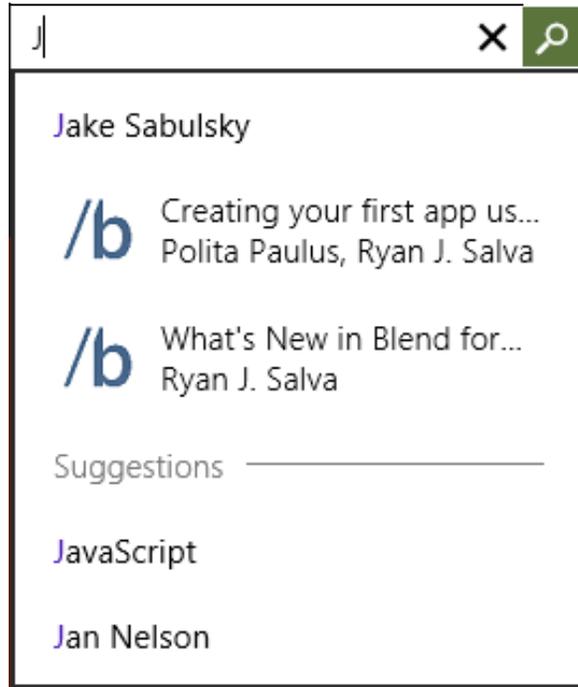

Cronologia

Suggerimenti di possibili risultati

Type-to-search

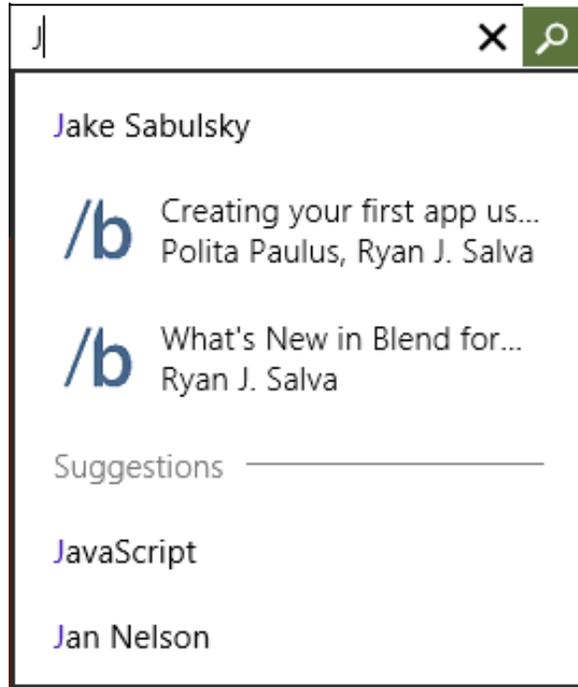

Controllo SearchBox

← **Cronologia**

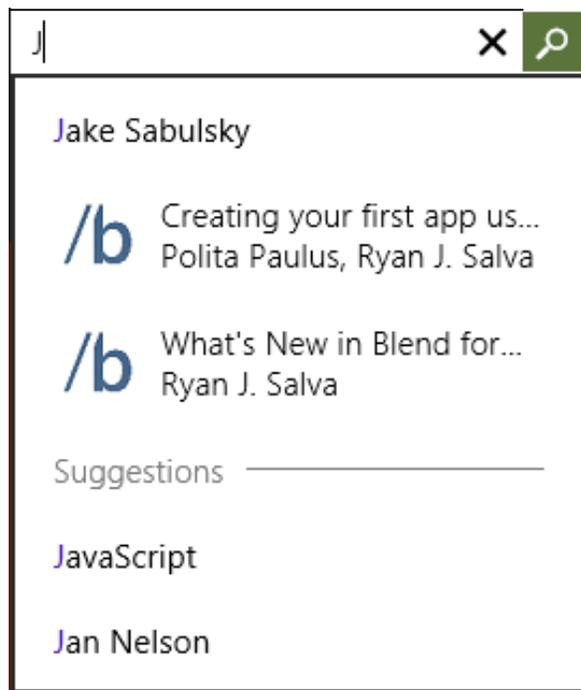

Controllo SearchBox

← **Possibili risultati di ricerca**

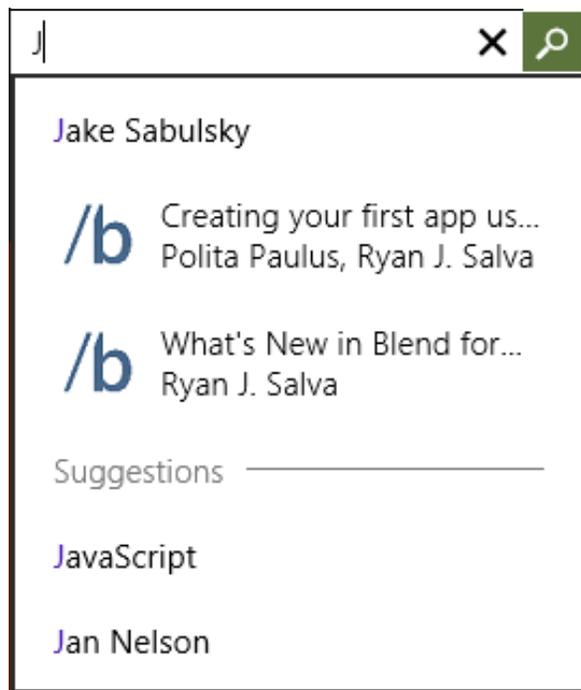

Controllo SearchBox

Suggerimenti per completare la query di ricerca

Tip: tipologie di suggerimenti

Mettere sempre i possibili risultati al di sopra dei suggerimenti della query

Dividere i risultati dai suggerimenti attraverso un separatore

Tip: Type-to-search

Filtrare i risultati durante la digitazione

E' un bene restringere i risultati mentre si sta ricercando ma....

Il filtraggio dei dati deve essere responsivo

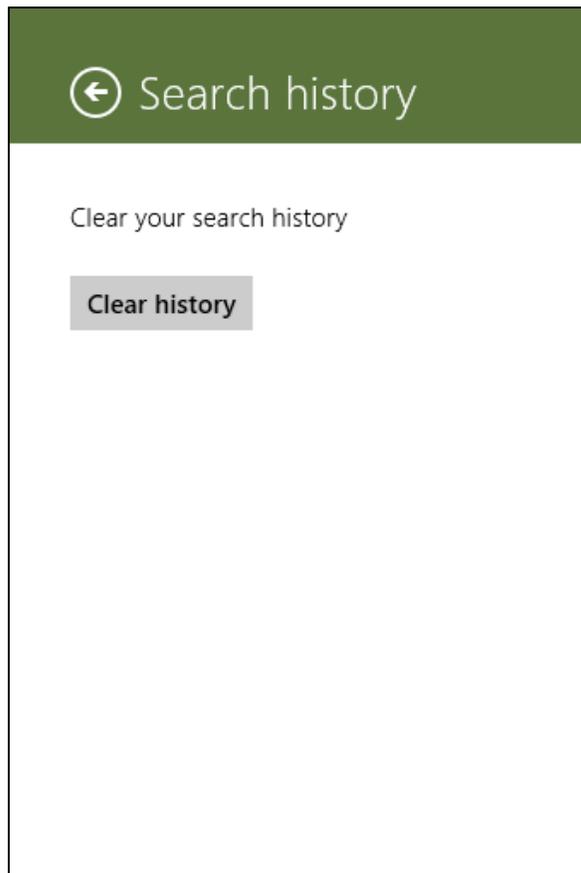

Se il filtraggio richiede dei dati da un web service, la ricerca potrebbe non sembrare efficiente

Se non avviene istantaneamente, considerate di usare i suggerimenti

Non rendere la ricerca troppo veloce rischiando l'effetto 'flash'

Tip: pulire la cronologia

Diamo la possibilità all'utente di poter cancellare la cronologia delle ricerche attraverso un settings della charm bar

API:

```
Windows.ApplicationModel.Search.Core.  
    SearchSuggestionManager.ClearHistory()
```

Tip: essere prevedibili

Usare la SearchBox per rendere semplice la ricerca

Usare un posizionamento coerente

In alto a destra di default

Mettere la ricerca in ogni pagina

Usare un placeholder

Aiuta gli utenti a capire cosa (non) possono cercare

Tip: curare la pagina dei risultati

Creare un design semplice per trovare in fretta i risultati...

Tenendo la view allineata al proprio brand

Usare la query di ricerca come titolo

Indicare il ranking dei risultati trovati

Ordinare i risultati...

Sottolineare i risultati corrispondenti alla ricerca

Tip: curare la pagina dei risultati

Fornire solo le informazioni essenziali

Non essere troppo minimali... Bisogna fornire anche i dettagli che aiutano l'utente a scegliere!

Niente più Grid

La Grid va bene, ma ci sono anche altri controlli, tipologie di design...
