Microsoft Business Intelligence – our reporting roadmap

October 29, 2015 by SQL Server Team // 31 Comments

Share This Post

- During PASS Summit 2015, Microsoft revealed its strategy to harmonize reporting content types across platforms and systems. They set up the guidelines of future developments for BI reporting.
- One of the key features announced was the introduction of **mobile reports**, that is reports optimized for mobile devices.

(Microsoft Business Intelligence – our reporting roadmap

The four Microsoft BI report types

The new approach distinguishes **four types** of reports, based on production technology and delivery method:

Paginated Reports

1) Paginated Reports. Standard report type, with many elements and complex business logic. Built with Report Builder or SSDT (Visual Studio).

Interactive Reports

2) Interactive Reports. Allow dynamic and interactive view. Built with Power BI Desktop.

(Microsoft Business Intelligence – our reporting roadmap

<http://blogs.technet.com/b/dataplatforminsider/archive/2015/10/29/microsoft-business-intelligence-our-reporting-roadmap.aspx>)

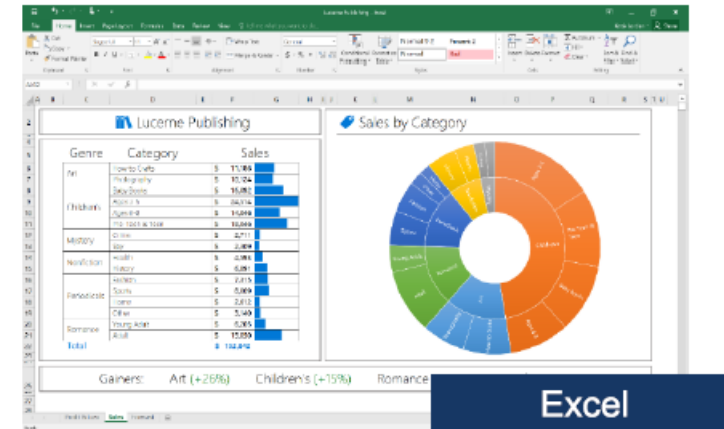

The four Microsoft BI report types

Mobile Reports

3) **Mobile Reports.** Specially optimized for mobile devices with simple logic and few elements. Built with Datazen Technology.

Spreadsheets

4) Analytical reports and charts.

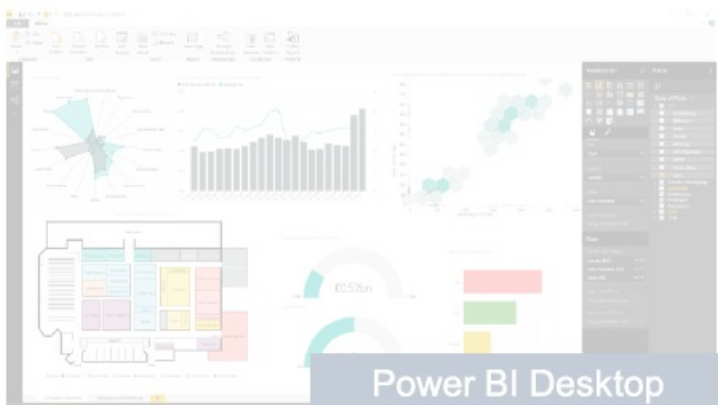

Created with Excel directly by end users.

Support for mobile reports

According to the new model, SQL Server Reporting Services 2016 is the comprehensive platform for on-premises BI report delivery. In the new release, Microsoft added support for **mobile reports and KPI**.

(Microsoft Business Intelligence – our reporting roadmap

Unified Mobile BI experience

The Microsoft promise ...

*... Whether using SQL Server Reporting Services on-premises, Power BI in the cloud, or both as your report delivery solution, there is a **single mobile application** for consumption of all mobile reports.*

*All of your mobile BI content is at your fingertips from within a **single, unified mobile app** to deliver insights any way, anywhere and from any device ...*

How can we create mobile reports?

Based on the new vision and development strategy, Microsoft's BI offer for mobile reporting is now made up of the following tools:

On-premises

- **SQL Server 2016 Mobile Report Publisher**

(former Datazen)

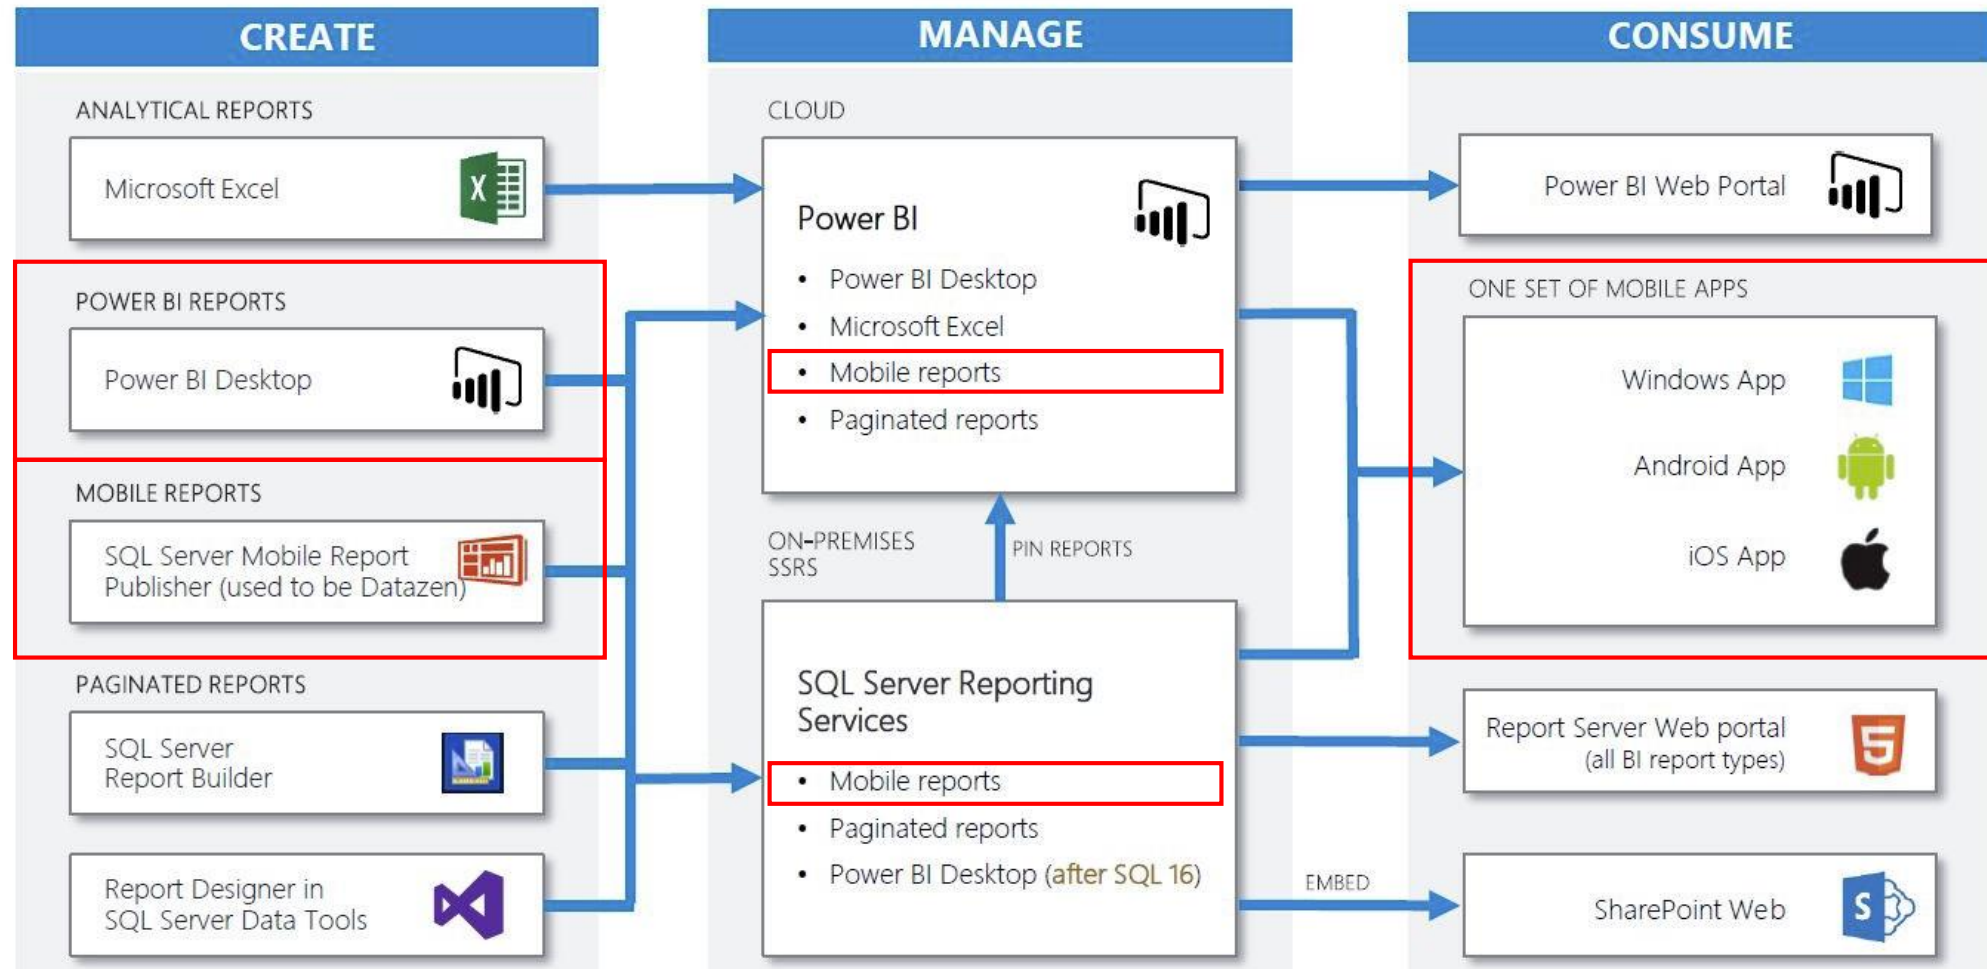

- **Power BI**

Cloud

Placement for mobile BI according to Microsoft

Mobile Report Publisher

Mobile Report Publisher

SQL Server Mobile Report Publisher is the new reporting tool expressly dedicated to create and delivery **mobile BI**.

It is based on **Datazen** technology a company acquired from Microsoft on April 2015. Datazen products were merged into SQL Server 2016 to build a complete BI platform for viewing reports on phones and tablets.

With Mobile Report Publisher developers can easily realize reports, dashboards and KPIs and publish immediately on every device. Everything integrated natively into SQL Server Reporting Services 2016.

<https://blogs.msdn.microsoft.com/sqlrsteamblog/2015/12/17/introducing-mobile-reports-and-a-brand-new-web-portal/>

Mobile Report Publisher

Mobile Report Publisher key features are:

- Quickness and simpleness. It's really easy to use
- Unified dashboards designer for any visualization
- KPI repository
- Native apps for all mobile platforms (Windows, iOS, Android)
- Direct browser access via HTML5 rendering
- Automatic rendering in any screen size
- Data sources availability

Mobile Report Publisher

The unique layout creation technology enables efficient coverage of the entire BI presentation layer and perfect scaling to all screens size for:

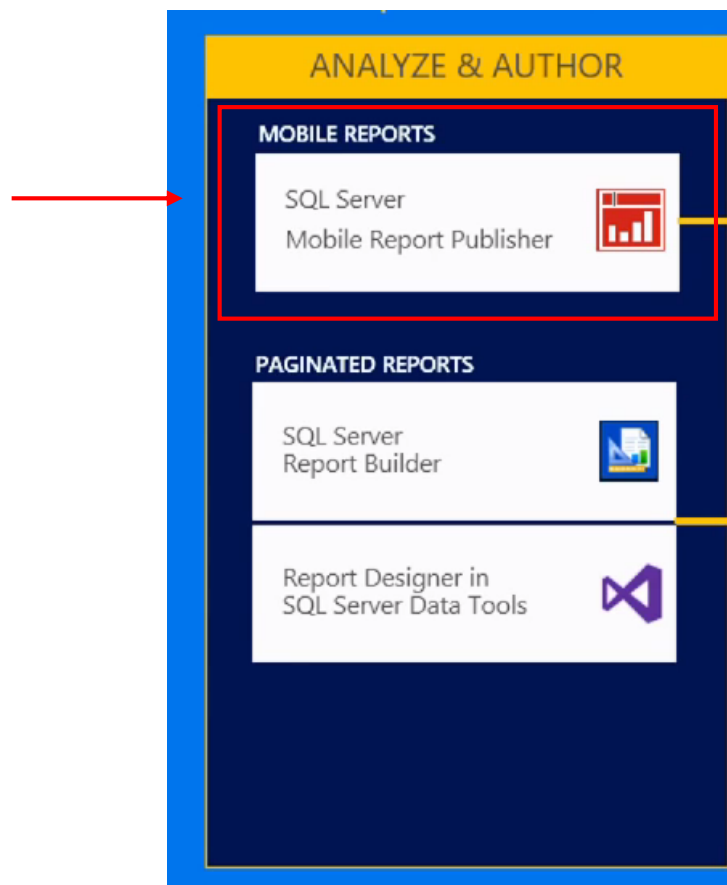

- Mobile phones
- Tablets
- Laptops
- Desktops
- Large screens

Mobile Report Publisher

Dashboards are built locally on developer's computer using the Publisher app and then published on Reporting Services server.

Power BI
mobile app

What do I need to publish reports?

To create and publish report you need:

- SQL Server 2016 Mobile Publisher on your laptop
- SQL Server 2016 Reporting Services with:
 - a data source
 - a dataset to connect to
- Power BI app on mobile devices (tablet, smartphone)

A nighttime cityscape featuring several tall skyscrapers with illuminated windows. In the foreground, a multi-lane highway shows long-exposure light trails from vehicles, with red trails from taillights and white/yellow trails from headlights. A pedestrian bridge with railings and some greenery is visible on the right side of the highway. The overall scene is a vibrant urban environment at night.

Pro & Cons

Why use Mobile Report Publisher for mobile BI

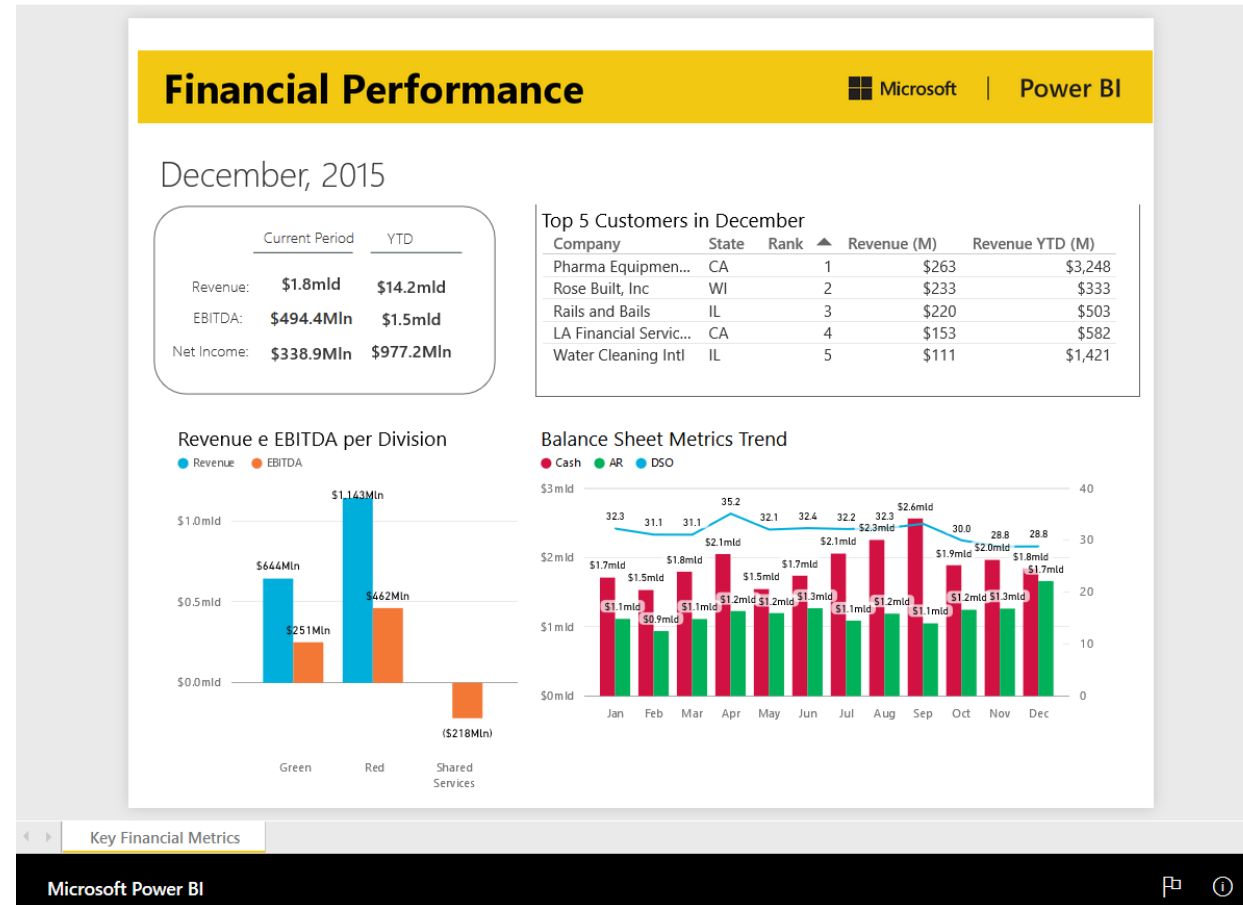

- It's made to this Fits natively for every device
- Low learning path
- Rapid dashboards creation and development
- Easy delivery method
- Many data sources available
- Corporate security and profiling. Reporting Services authentication rules
- Free (bundle with SQL Server)

Why not use Mobile Report Publisher for mobile BI

- Simple business logic
- No objects behavior personalization
- Simple navigation
- Needs a app to be executed
- Need IT professional to set up and configure server application
- No data manipulation allowed. Query must be prepared in advance
- Manages little volumes of data

Power BI

Power BI

What is Power BI?

Microsoft Power BI is the new **cloud-based** business analytics service that helps create live operational dashboards from on-premises and cloud data in one central location that you can access across a range of devices.

With Power BI you can:

**Create stunning
interactive reports**

**Monitor your
business at-a-glance**

**Transform, analyze,
visualize data**

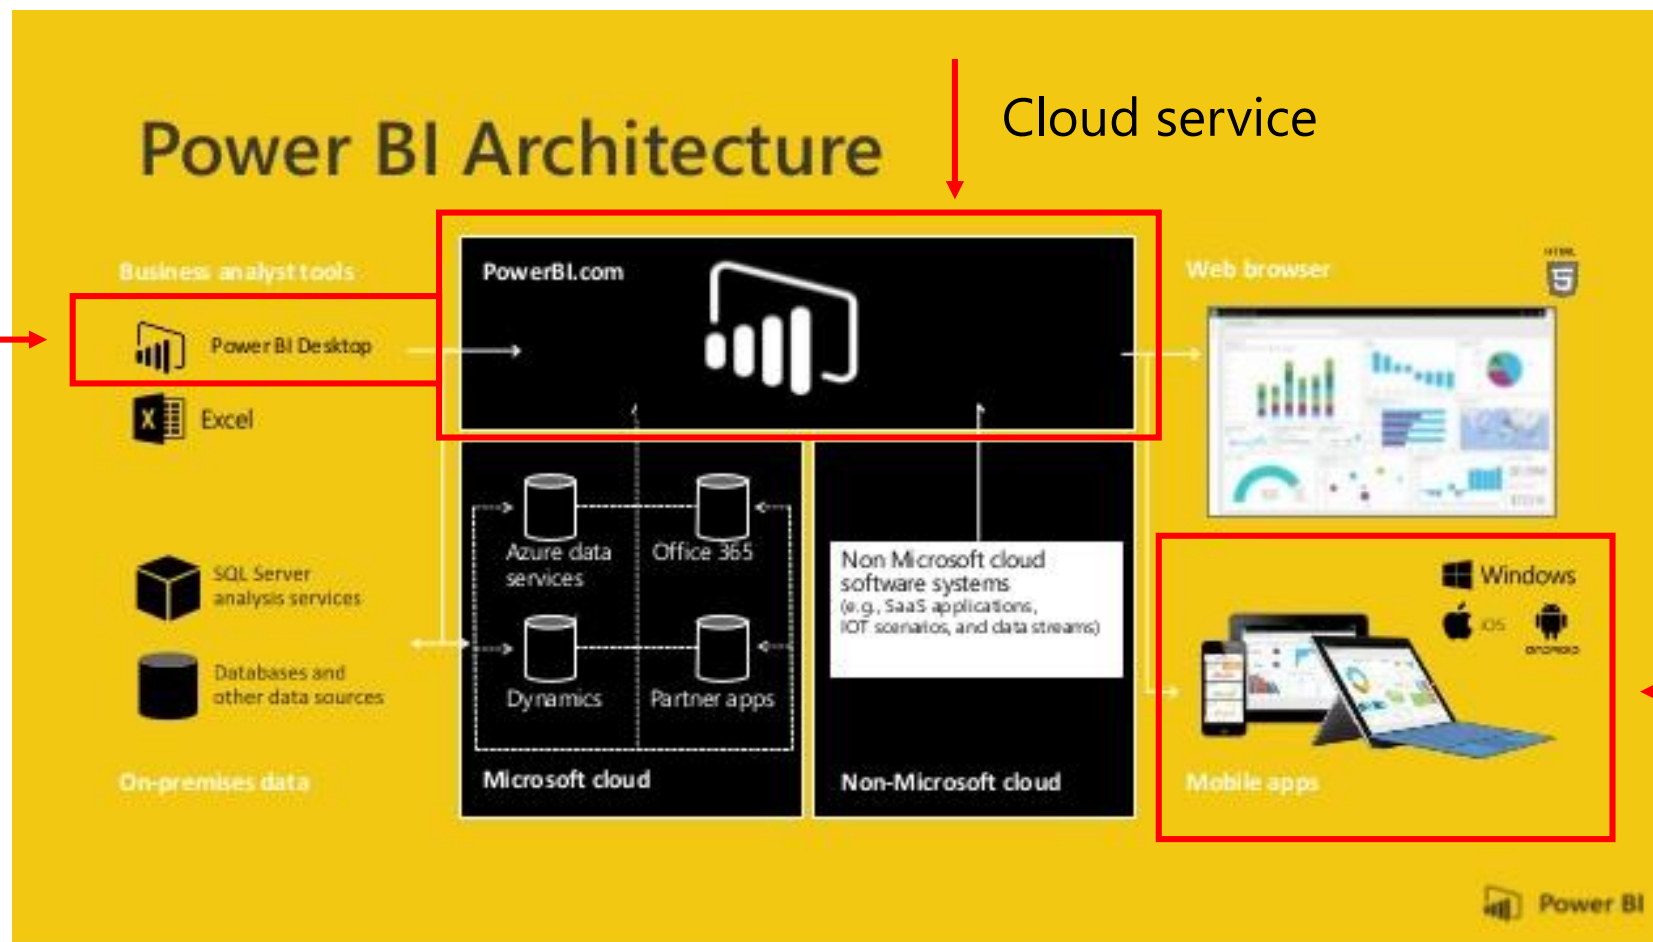

Power BI

DEMO

Power BI mobile app

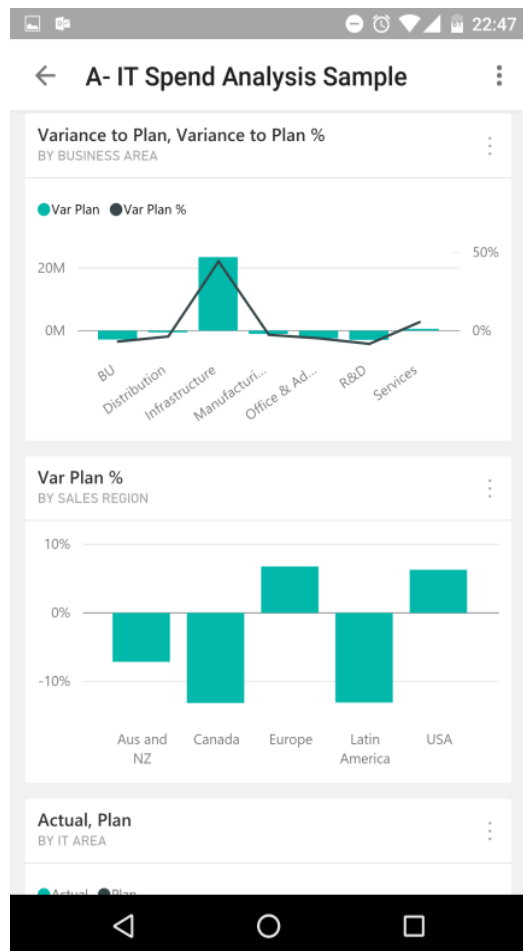

- Set report layout in Power BI Desktop
- Publish a report
- Set dashboard layout in Power BI service
- Open the app
- Navigate through reports and dashboards in mobile app

www.futuredecoded.it

#FutureDecoded

Mobile App – user experience

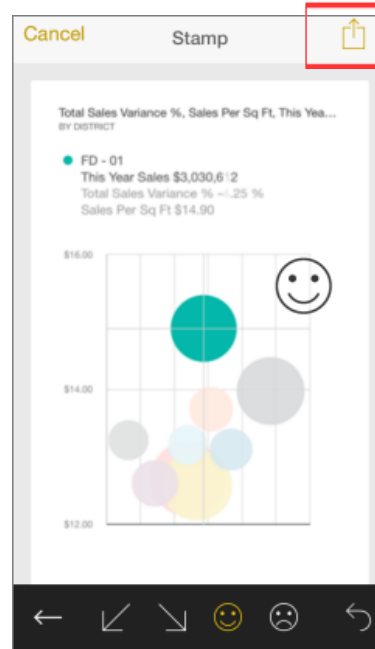

With Power BI mobile app, users can:

- Have live access to dashboards, reports and KPI, either on cloud or on premises
- Interact and navigate tiles, to get data insights
- Sort charts and data,
- Drill through inside mobile reports and KPIs or navigate to external URL
- Stay up-to-date with data-driven alerts
- Share dashboards with other users
- Collaborate and interacts with groups and content packs
- Annotate and share a snapshot of a single tile
- Create picture tiles into dashboards
- Scan a Power BI QR code (generated by Power BI Service)

Power BI

Mobile App – interact with tiles

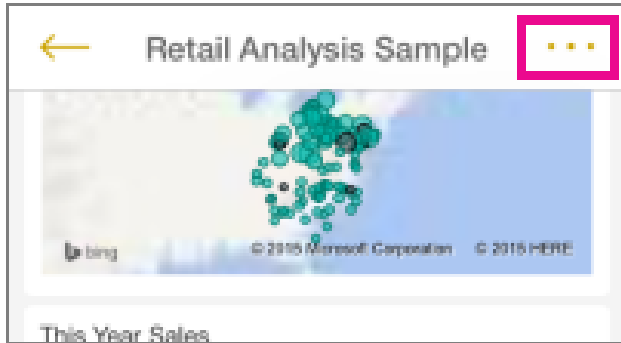

After annotating, type the share icon again and you can send the tile by e-mail.

Tap a tile and it opens in focus mode

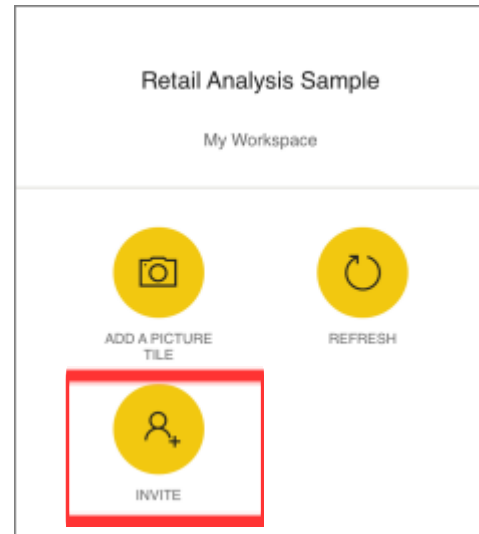

If you tap on share icon, you can add comments or signs to the tile

Mobile App – share a dashboard

In the upper-right corner of the dashboard, tap the ellipsis to open the dashboard menu.

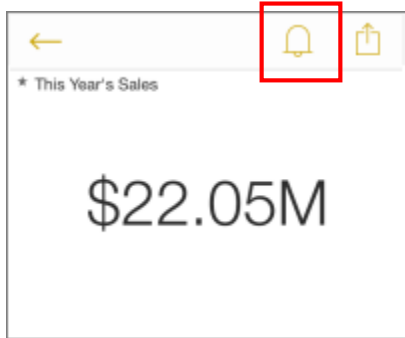

Tap **Invite**

Type names and a message to accompany your dashboard invitation. Your colleagues get an email invitation with a direct link to the dashboard.

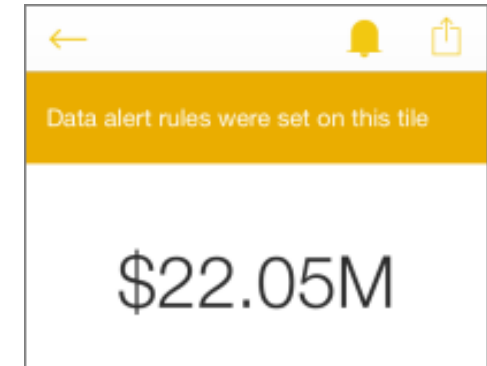

Mobile App – set data alerts

You can set alerts to notify you when data in your dashboards changes beyond limits you set. Alerts work for tiles featuring a single number.

Tap the bell icon. Set numbers to receive alerts.

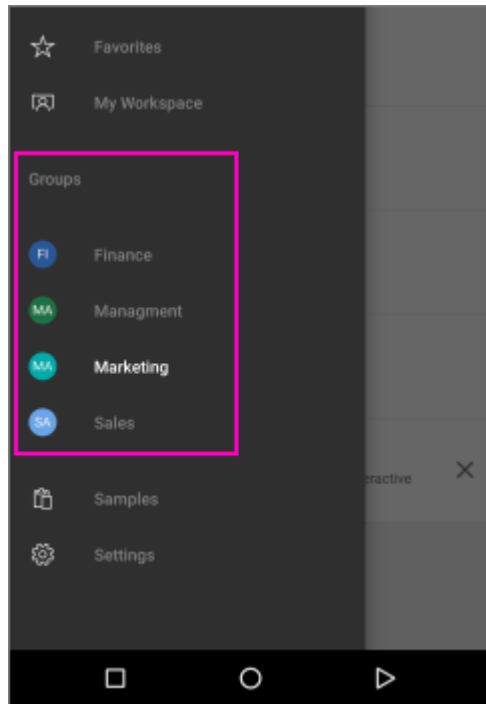

When the data in the dashboard is refreshed, you'll receive an alert if the new value is above or below the number you set.

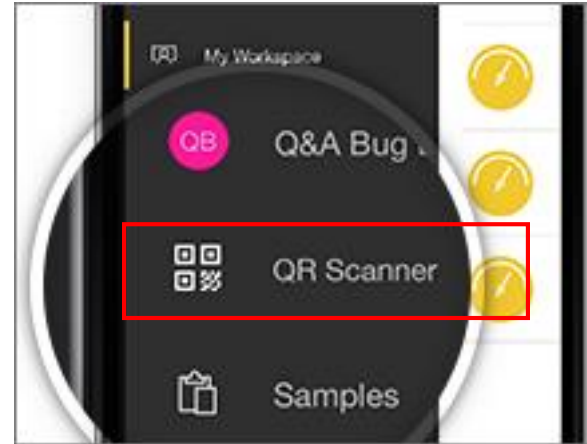

Power BI

Mobile App – Groups – QR Code

You can collaborate and interact with group dashboards and content packs you created on Power BI service

You can create a QR code in Power BI services and then scan that code for immediate access to a relevant tile, right from your phone.

Power BI

Mobile App – barcode

With the Power BI scanner for iOS, you can now scan barcodes printed on products. This will display related reports filtered by the scanned value.

| Product Category | Product | Target Mix |
|------------------------|--------------------|------------|
| Décor | Pillows | 30 % |
| Décor | Candles | 50 % |
| Décor | Home Fragrances | 20 % |
| Dining & Entertainment | Stemware | 50 % |
| Dining & Entertainment | Cocktail Glasses | 50 % |
| Electronics | Audio | 10 % |
| Electronics | Computers | 20 % |
| Electronics | Phones | 10 % |
| Electronics | TV and video | 60 % |
| Furniture | Bathroom Furniture | 30 % |
| Furniture | Dining Furniture | 70 % |

| Address | Product Barcode | Ir |
|-------------------|-----------------|----|
| City | 7290010237530 | |
| Continent | 7290010237531 | |
| Country/Region | 7290010237532 | |
| County | 7290010237533 | |
| Latitude | 7290010237534 | |
| Longitude | 7290010237535 | |
| Place | 7290010237536 | |
| Postal Code | 7290010237537 | |
| State or Province | 7290010237538 | |
| Web URL | 7290010237539 | |
| Image URL | 7290010237540 | |
| Barcode | 7290010237540 | |

To filter a report by barcode value, you need to categorize data in column as a barcode type.

Power BI

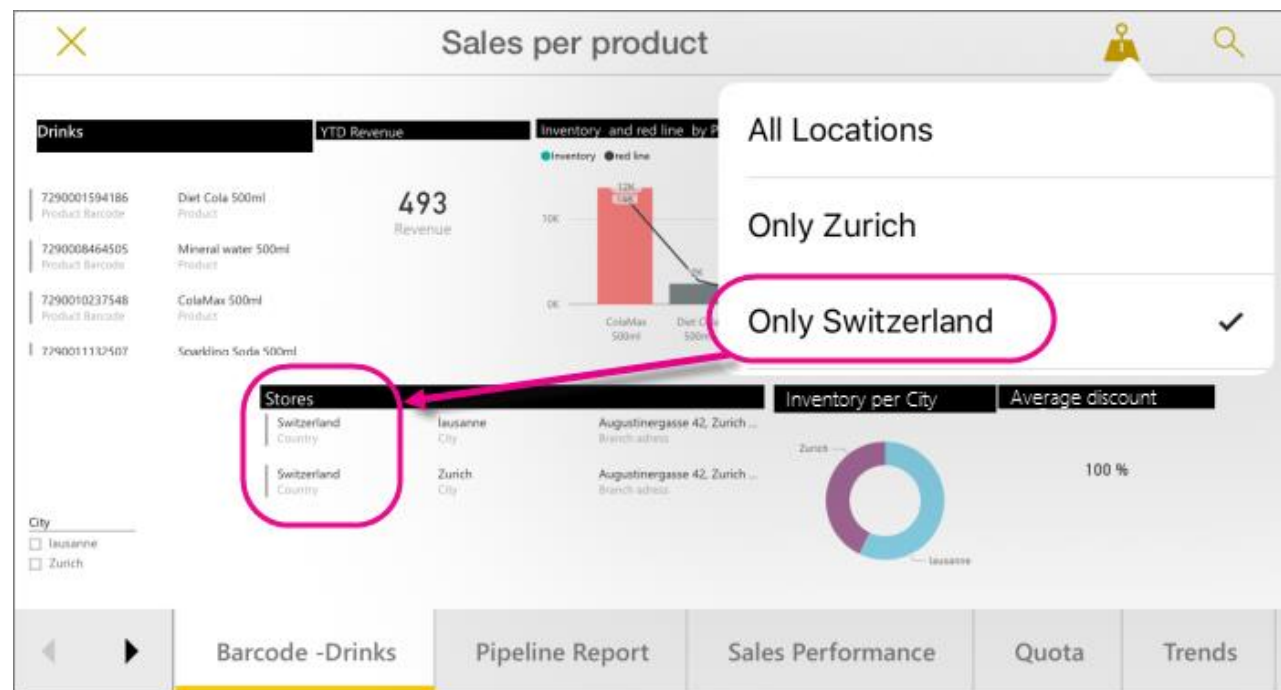

Mobile App – Geographic filtering

When you create reports in Power BI Desktop, you can categorize geographical data for a column. Then, when you view that report in the Power BI mobile app for iOS, Power BI automatically provides geographical filters that match where you are.

Tap the pin in the upper right corner of your report. You can filter on the locations you set up in the report.

You can even center any map tile on your dashboard to your current location to see only geographic points that are near you.

DEMO

Power BI mobile app

- geographic and location filtering
- send and comment tile snapshots
- inviting teammates
- setting data alerts
- working with groups and sharing dashboards
- scan QR code

Pro & Cons

Why use Power BI for mobile BI

- Fits perfectly on every device
- Lots of data sources both on-premises and on-line
- Advanced data modeling and manipulation (Power Query, M language)
- Simple report and dashboards creation and development
- Easy delivery method
- Customizable layout
- High interactivity with tiles
- User custom visuals
- Suitable for expert users to perform Self Service Analysis. No need for IT professionals

Why not use Power BI for mobile BI

- Cloud service
- For working on-premises, it needs a gateway
- No direct real time access to data. It needs a gateway for connection
- Needs a app and a login to be executed
- No easy manual settings for groups collaboration and content packs creation
- User profiling and visibility rules
- No easy way to deliver contents within a Corporate
- Needs a third-party tool to deliver app updates
- No subscriptions
- Cost for Pro license (9,99\$ month/user)

Choosing the right tool

What's the “scope” of every tool? Are there overlaps?

SQL Server Mobile Report Publisher: mobile, on-premises dashboards, with high interactivity and few elements. Fitted for distributed mobile Corporate BI

Power BI: hybrid reports and dashboards, integrating data from both on-premises, Internet and cloud data sources. Highly customizable and advanced data shaping. Fitted for Self Service BI, data analyst, and groups collaboration
